

Year 2 Science – Plants

For the remaining lessons in this unit, you will need some seeds and a bulb, which you can collect from the Londis shop on the Petworth Road in Chiddingfold.

When you go into the shop, you simply need to say that you are in Year 2 at St Mary's and you will be handed an envelope containing the following:

- 4 x sunflower seeds
- a single bulb

You will need to plant these in this week's science lesson.

Sunflower seeds

You will need four pots with soil in. Place one seed in each pot (seed slide 15 on the PowerPoint). Then, you need to treat each seed in a different way (see slide 16). Make sure you label each pot so you know which is which. Complete the Plant Growth Prediction Sheet.

Note: The PowerPoint assumes that children work in groups with each group leaving their seed in different conditions but, because of home learning, each child will compare all four conditions to see what difference light and water makes.

The bulb

In a separate pot of soil, you need to bury your bulb with the pointy tip facing upwards. Make sure you leave this pot in a sunny spot and provide water when the soil looks dry.
