

Bonjour,

We have finally made it, the last week of home learning! I am looking forward to seeing you all back in the classroom next week but until then I'll tell you what I have planned this week.

This lesson is similar to lesson 1 but instead of looking at what key elements animals and plants need to survive, the lesson focus is on different types of habitat. The PowerPoint gives an example of each type of habitat and tells you where it can be found in the world, tying in with some geography.

The activities that you will be completing can be found on **slide 28** (Listening Exercise 2a) and **slide 31** (Listening- Reading Exercise 2b). There are some additional activities afterwards such as a reading one which you can attempt if you would like but I am happy for you just to look at them and see the answers.

The answers are on the following slide for each sheet so no peeking until you have completed it!

- Firstly, follow this link  
<https://www.languageangels.com/homeschool/>
- Next enter the login details:  
Username: **Stmary3040**  
Password: **lahome**
- Then under intermediate challenge have a look for the unit 'Habitats'.
- Once found simply begin lesson 2.

When playing through the slide show I would recommend repeating back the words and phrases to help with your pronunciation of them.

Au Revoir

Monsieur Hanson
